Finance professional with a builder mindset

A career foundation in accounting and finance, strengthened by hands-on data analytics and workflow automation.

PROFESSIONAL SUMMARY

Accounting & Finance professional with 7+ years of experience in accounts receivable, project finance, financial reporting, budgeting, cash flow management, and project-based accounting. Hands-on experience with SAP S/4HANA and management reporting through Power BI and Google Looker Studio.

I use Python, Google Colab, GitHub, and workflow automation to improve data processing, validation, and recurring reporting - with a practical focus on accuracy, repeatability, and decision support.

REPORTING & AUTOMATION

POSITIONING

**Finance & Accounting professional
with practical data and automation
capability.**

Core skills & tool stack

The tools are not the headline - they support finance, reporting, control, and better decisions.

FINANCE & ACCOUNTING

- Financial reporting & closing
- Accounts Receivable & aging
- Budgeting & forecasting
- Cash flow reporting
- AR / GL reconciliation

DATA & BI

- Microsoft Excel
- Google Sheets
- Power BI
- Google Looker Studio
- Data visualization

AUTOMATION & CODE

- Python / Pandas
- OpenPyXL
- SQL / SQLite
- Google Colab / VS Code
- Git / GitHub / GitHub Actions

Use case lens: finance reporting → data consolidation → validation → automation → management visibility

AR & management dashboards

Turning receivable data into a clearer management view for collection prioritization and periodic review.

BUSINESS CONTEXT

Receivable information needed a clear view by project, owner, category, and period - without rebuilding reports for every review.

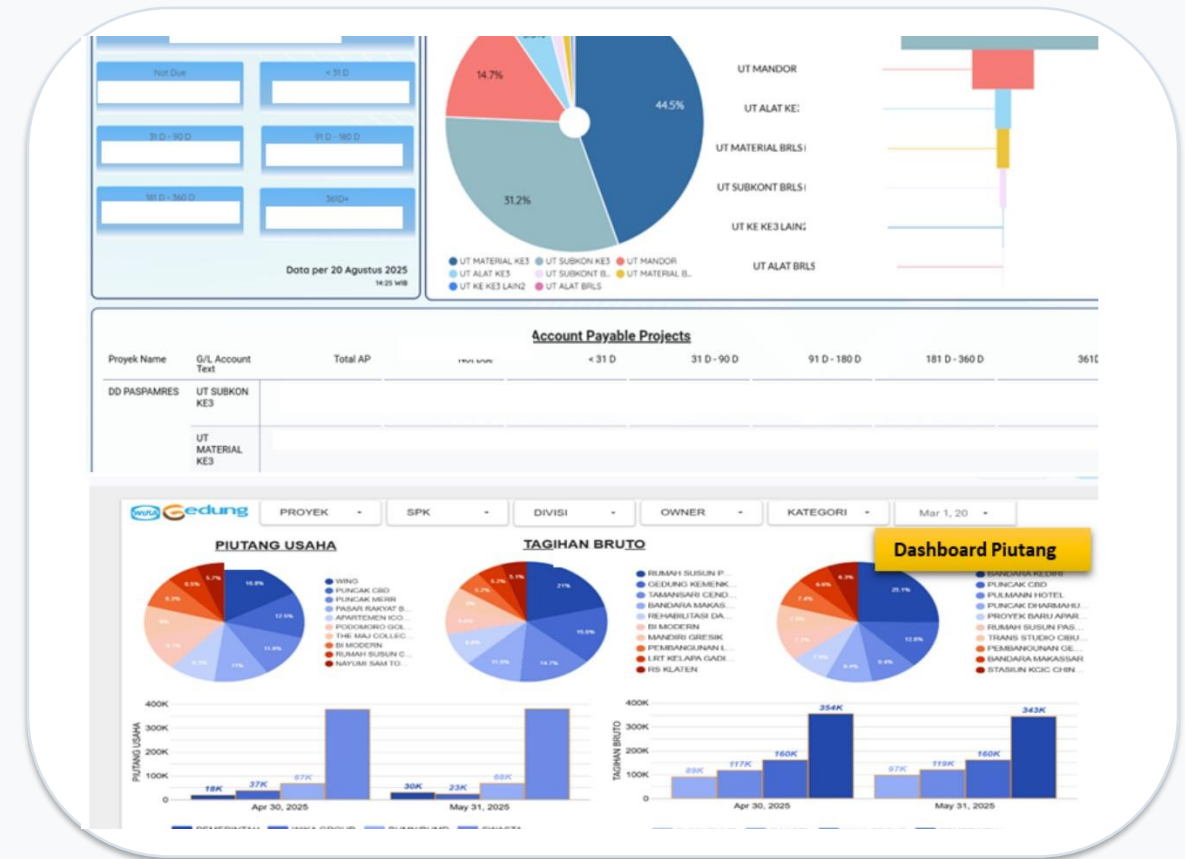

WHAT I BUILT

- Interactive dashboard views for receivables, billing, retention, and aging.
- Filters and breakdowns to support management and Board-level review.
- Google Sheets as a structured reporting layer for recurring updates.

Google Sheets

Google Looker Studio

Power BI

Budgeting, cash flow & annual planning

Structured reporting to improve visibility of budget utilization, cash movements, and annual planning inputs.

RESPONSIBILITIES

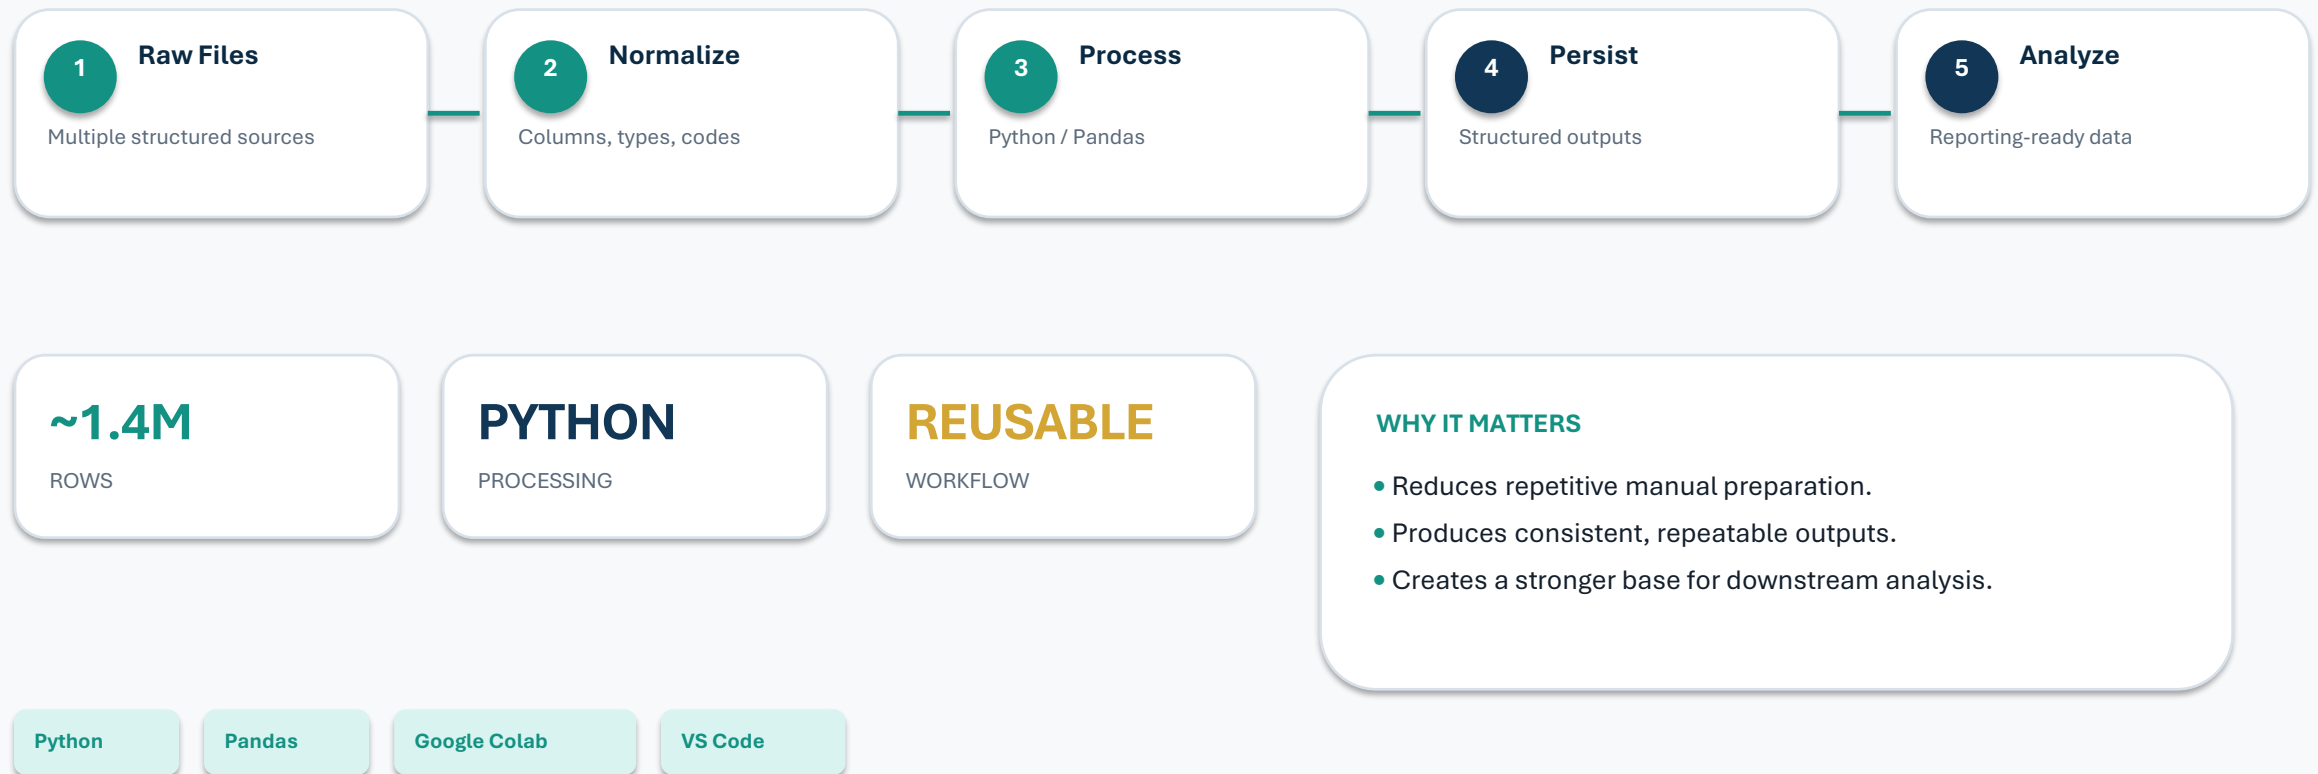

- Consolidated annual division budgets and monthly budget utilization.
- Prepared cash flow reports summarizing project inflows and outflows.
- Compared actual vs. budget and highlighted significant variances.
- Supported financial inputs for annual work plan and budget preparation (RKAP).
- Coordinated with project teams for cash flow forecasting.

1.4M-row data processing pipeline

A reusable Python workflow for high-volume consolidation, cleaning, and structured outputs.

Automated budget & document validation

Turning repetitive cross-checks into a repeatable validation workflow with clearer exception handling.

DESIGN PRINCIPLES

- Automate checks that are deterministic; keep judgment-based review with the user.
- Surface exceptions instead of hiding them inside spreadsheets.
- Make repeated validation faster without sacrificing traceability.

[Python](#)[OpenPyXL](#)[Google Colab](#)

GitHub Actions - scheduled workflow automation

A scheduled processing pattern with retries and status visibility for recurring data workflows.

RELIABILITY LAYER

Retry handling for transient Google Sheets API errors, plus explicit logs and run status for recurring jobs.

WHY GITHUB ACTIONS?

- Versioned workflow configuration.
- Repeatable scheduled execution.
- Transparent logs for troubleshooting.

GitHub

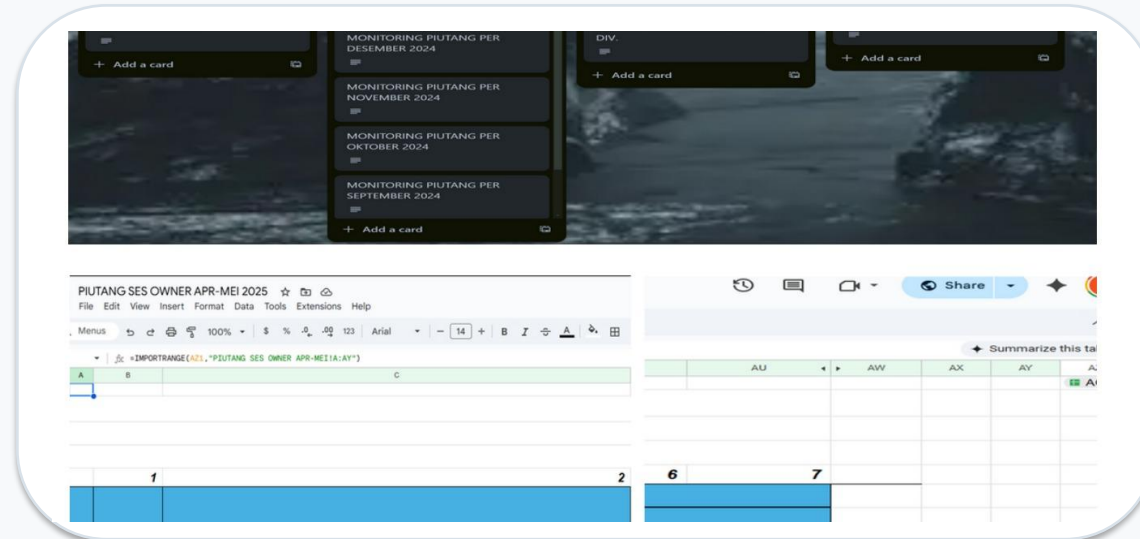

GitHub Actions

Google Sheets API

Python

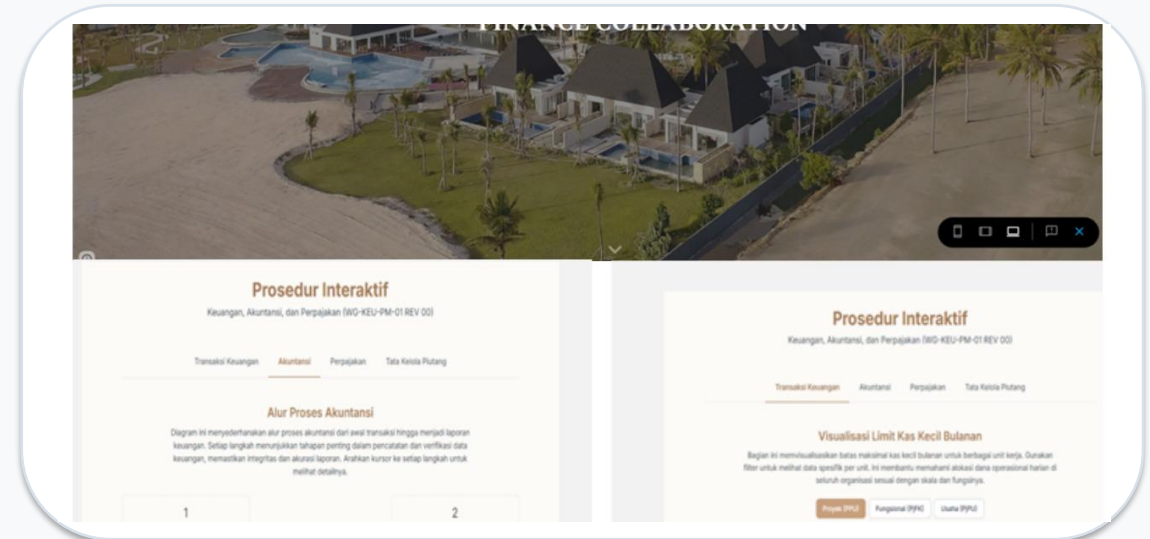

From spreadsheets to a shared finance workflow

Two practical examples: automated consolidation and a central collaboration hub for finance information.

AUTOMATED DATA CONSOLIDATION

Master sheets using IMPORTRANGE, QUERY, ARRAYFORMULA, and pivot tables to reduce manual copy-paste and standardize recurring reports.

FINANCE COLLABORATION WEBSITE

A central hub for SOPs, job descriptions, dashboards, and document links - improving access to procedures and team collaboration.

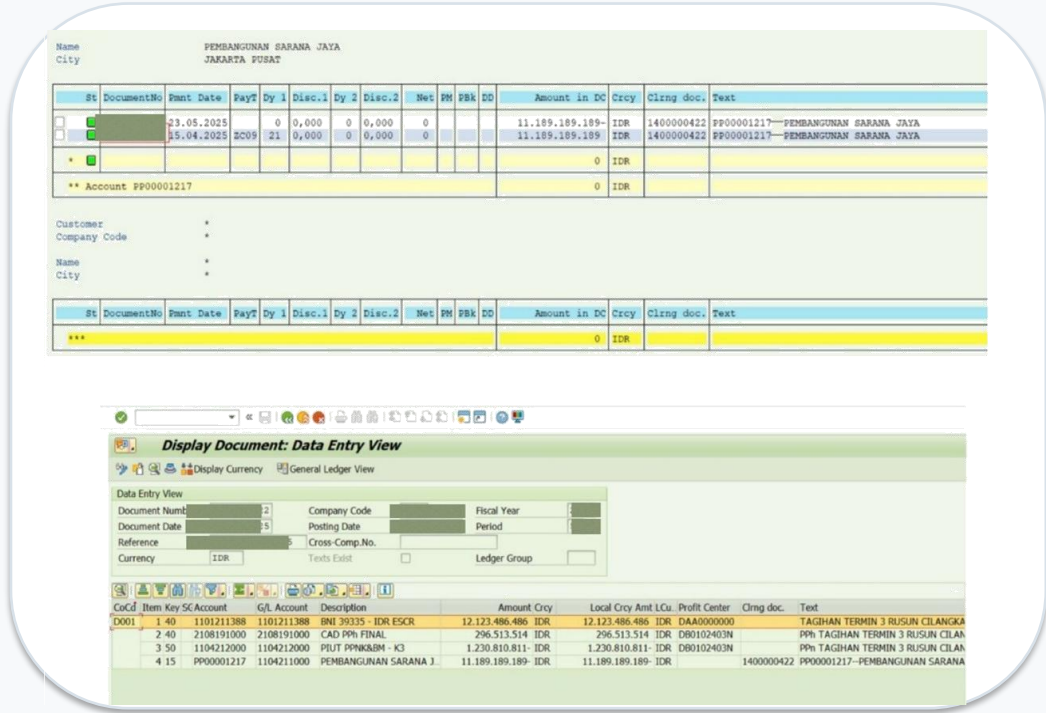

SAP S/4HANA - Accounts Receivable

Hands-on finance operations supported by disciplined reconciliation, billing tracking, and management reporting.

CORE RESPONSIBILITIES

- Posted and verified AR journals, including progress billing, retention, and other receivables.
- Reconciled AR sub-ledger with the general ledger.
- Monitored AR aging and coordinated collection follow-up with project teams.
- Prepared AR and collection reports for monthly management reviews.
- Supported month-end closing related to AR and revenue recognition.

Finance process discipline first - dashboards and automation strengthen the control environment.

Portfolio screenshot shown for context; sensitive figures may be masked.

Education & professional development

A finance foundation strengthened by continuous development in modeling, supervision, analytics, and technology.
